Notice Regarding Reduced Water Pressure on 10/10/23

Due to a pressure reduction valve malfunction, portions of the city's water system experienced a temporary reduction in water pressure on Monday October 10th. The issue was quickly resolved and did not result in a complete loss of pressure, so there was no opportunity for contaminants to enter the system and no health or safety concerns to report. Please be assured that if there had been any risks to residents, the city would have immediately notified the community.
